Problem Statement: RAG-Based User Training Chatbot - S/4HANA & ECC

Description:

Generic AI Solution (Platform-Neutral)

Build a RAG (Retrieval Augmented Generation) Training Chatbot that indexes all available process documentation, user manuals, IT ticket history, and training materials into a searchable vector database. Users ask questions in plain English via a chat interface embedded in their daily workflow and receive precise, step-by-step answers retrieved directly from the organisation's own documentation - not generic help content.

-

The chatbot is trained on Drive Medical's own documents - it answers Drive Medical-specific process questions, not generic SAP theory that may not reflect the organisation's configured workflows.

-

New or updated process documents are added to the vector database incrementally as they are published - the chatbot stays current with each S/4HANA enhancement or process change without requiring retraining.

-

Role-based document access: planners see IBP and SIOP documentation; procurement users see purchasing workflows; finance users see FI/AP procedures. Users do not see documentation outside their role scope.

-

Every chatbot response includes a source citation - linking to the exact process document or user manual section from which the answer was retrieved. Users can navigate directly to the source for deeper reading

This document confirms that the above team has successfully selected the assigned business case.

Vibeathon 2026 - Guidelines & Compliance

Guidelines - Level 1

- Each team will be given a defined time slot for presentation
- Presentation should include the following at the least:
 - Problem Statement
 - Proposed Solution
 - Solution Approach & Architecture
 - Business Impact & Features of your solution
 - Bill of materials/Tech stack
- Submission Deadline: 11-May-2026

Rules & Compliance

- All submissions must be original work
- Plagiarism or reuse of existing solutions without modification is not allowed
- Only one submission per team is permitted
- Teams must adhere to all timelines and guidelines
- Any misconduct may lead to disqualification
